The preparation and execution of a yearbook can indeed be a most enlightening experience. It is the hope of the Pacemaker staff that the reader obtains the same pleasurable reactions that were enjoyed as the book was composed. Obtaining an education in osteopathic medicine will continue throughout our lives, but the formal instruction which we have received here constitutes the foundation on which all future experience will be piled. Like many foundations, our four years of instruction here has been lacking in some of the refinements found in the finished product, but a solid base has been established. How we, as physicians, perform not only in our clinical practice, but also in our civic responsibility, is a reflection of our formal training. To remind us in future years how this foundation was built and with whom we shared the toil, our yearbook serves. We have strived to make our pictures portray the various situations as they have been encountered and captioned them with remarks fitting to the occasions as we felt them.

We would also take this opportunity to thank all those people who have helped make real the image we glimpsed four years ago. As we conduct ourselves in the future, we will do all possible to bring to those who remember us a pleasing image of the class of . . .

Elizabeth A. Burrows D.O.
Dedication

The class of 1967 had no easy matter before it when it began to choose to whom the yearbook would be dedicated. We have been impressed by the wisdom, wit, and clinical acuity of many of our teachers. However, as the word “dedication” itself, became repeatedly used in our discussions, the choice became self-evident.

To dedicate is to devote. The devotion of one's life and total being to a profession is synonymous with this physician. Temperament and occasional intolerance fostered by a sincere desire to improve students' performance and professional excellence, combined with a kindness and concern for their personal well-being characterize our most-remembered instructor.

With continuing affection we are proud to dedicate the 1967 Pacemaker to:

Dr. Elizabeth Burrows
GROWTH AND DEVELOPMENT
Many avenues of exploration have been taken by the school in reaching a decision on how to direct our future expansion. The phrase "Building for Tomorrow" has taken on a new meaning at the College of Osteopathic Medicine and Surgery. Progressive changes within the walls of the college are prelude to tangible, physical changes.
A major curriculum revision is the most significant advancement that has come to the College in recent years. The innovation follows a trend widely supported among progressive medical educators to introduce students to the doctor-patient relationship as soon as possible. Each of the four years is oriented toward giving the student a broad medical background based on a close relationship between study and application. This represents a break with the traditional patterns in medical schools across the country which confines students to impersonal studies of basic sciences during the first two years.

Clinical topics and actual patient presentation are now a part of the first year curriculum. The student spends his entire third and fourth years in small group teaching situations in the Clinic, College Hospital, and affiliated hospitals. More time is available for the student to pursue electives in areas of individual interest.

By stressing from the first year the relationship between basic science studies and patient care, the student advances more rapidly as a "bed-side" student during his upper class years. This enables the College to expose the student to more areas of medicine than were formerly possible. The graduates will be better prepared than ever before to begin a career in the changing, advancing world of medicine.

*BUT* . . .
inward growth is not permanent unless outward growth keeps pace. Providing adequate facilities for a progressive curriculum, a growing faculty, and expanding research is now an immediate goal of the College.

Careful plans have been laid for a building program that can be realistically attained and at the same time be completely adequate, with built in versatility to adapt to future requirements.

The program consists of a single two story building to be constructed at the Fort Des Moines site which will house three major functions: (1) Diagnostic Treatment Center, (2) Departmental offices and research areas, (3) Student laboratories, lecture halls, and study areas.

The current clinic building at Fort Des Moines will become an administration building. An adjacent building owned by the College will be converted into an extensive medical library. The new building together with the two rehabilitated buildings will double the present space.

The College will enlarge a comprehensive teaching program in cooperation with Des Moines General Hospital, which has a new 75-bed wing under construction.

The current building program constitutes phase one of a long range development plan that will eventually see the construction of student housing units, space for additional faculty, and finally, a general hospital expressly designed as a teaching facility.

Completion of the first phase of the project will mean modern classrooms and laboratories adapted to maximum use of latest educational techniques; clinical facilities providing a teaching program and out-patient clinical service second to none; modern, fully equipped research areas and departmental space attracting additional highly qualified faculty members.

And of most importance, completion of the first phase of the project will mean improved health care for the city of Des Moines, progress for the osteopathic profession, and response to the nation's call for more and better centers of medical education.
On behalf of the faculty, I congratulate the members of the Class of 1967 as they consummate their formal education at the College of Osteopathic Medicine and Surgery. The years which you have spent at this College have prepared you for a lifetime of continued learning, service to patients, and service to your respective communities. I wish each of you Godspeed as alumni of this College.

Thomas Vigorito, D.O.

Thomas Vigorito, D.O
Vice President for Academic Affairs
and Dean of Faculty
TO THE CLASS OF 1967:

In the four years at COMS your routine has been constant change. This change has meant growth to you, both from the standpoint of expertise in the technical aspects of medicine as well as growth in the character structure necessary to be a professional man.

You are going into a changing world and the burden will be on you to make changes that will add to your growth as an Osteopathic physician. The phase of development you just completed paves the way for continued growth in your professional career.

You will be in a position to do credit to the Osteopathic profession by the part you play in your community, in your interrelationships with your colleagues, and especially in the primary consideration; namely, care of your patients.

I am proud that you are now an "alum" of COMS. I hope you will also look back with pride to your school. I wish you success in your practice as an Osteopathic physician.

G. Pat Ray—Treas.
Bernard Grabelle—Secy.
The class of 1967 remembers many things about the last four years. Many of the thoughts bring back pleasurable memories of hours spent outside the classroom evolving friendships that will last a lifetime. Other thoughts revive the seemingly endless hours spent in lectures and laboratories. The following few pages will hopefully serve to remind us of some of the more meaningful moments.
Old Teachers Never Die, They Just . . .
"There will be a slight change in the curriculum for your Senior year."

Who's Kidding?

Will it ever work out?

Will it ever work out?

Will it ever work out?
"It is conceivable that the possibility may not be entirely probable."

Will it ever work out?  
Will it ever work out?  
It worked out!

Flint Osteopathic Hospital, Flint, Michigan
Rocky Mountain Osteopathic Hospital, Denver, Colorado
Wilden Osteopathic Hospital, Des Moines, Iowa

Utilizing more than 1,000 teaching beds, the college is able to expose the senior class to over 18,000 different patients during the three month hospital clerkship period.

During this time the senior student prepares himself for the very near year of internship. It consists primarily of bedside teaching, whereby small groups of students observe and assist faculty members in the care of patients. Independent individual study habits are further cultivated by allowing ample time for reading in well equipped libraries during off-hours. This contact with the acutely ill patient makes real the years of preparatory study. Hospital routine and technique are learned so the culmination of four years can be a complete physician.

DIVISION OF VENEREAL DISEASE CONTROL
DES MOINES, IOWA
Many hours were spent preparing the paper.
Disaster Drill

On April 7, 1966 the College of Osteopathic Medicine and Surgery served as the host hospital for a city-wide civil defense drill. Under Dr. William Gonda, the school provided 200 students to act as disaster victims and others to help with transportation of the injured. The victims were moved from Veterans Auditorium where the simulated disaster occurred to all seven of the hospitals in the city. The purpose of the drill was to test the capacity of the city of Des Moines to deal with a peacetime emergency concerning many people and all who observed considered it a success.
The victims were moved rapidly.

SOME OF OUR OWN DISASTERS
The major problems were sorting of the victims according to the severity of their trauma and the treatment of shock.

We did some treating of our own
OUR FAMILY ALBUM
It would be a near impossible task and one requiring a book many times the size of this one to depict even a small fraction of the progeny of the class of 1967. With apologies to those parents whose children we are unable to include, the following sampling of our future generation is offered.

Many long hours of work
Under the tutelage of Dr. Miroyiannis, freshman students are introduced to the structure of the human body. Its development, functional correlations, and microscopic study aid the future physician as significantly as any course of study he will pursue in his career. The many hours spent in laboratory dissection are as a fleeting moment when the impact of the importance of this knowledge reveals itself. Our patience and vertebral structures are well tested in this, one of the most difficult yet equally rewarding courses of our first year.

Dr. N. Varner, Saturday morning

*Man is a piece of the universe made alive...*

*Emerson*
Rehabilitation is a new specialty among the medical sciences and its practitioners carry a title which few can yet pronounce, *physiatrist*. The progress of medicine has presented the practitioner with a rapidly increasing number of older patients who are as distinct a group as pediatrics. Not only to the geriatric, but also to the disabled patient, does Dr. Connair voice his lectures and demonstrations. In this specialty especially does osteopathic manipulative therapy prove its value.

Moses Jacquo Jr.
Laboratory Technician
“Wit and wisdom” are words suited not only to each other, but to our memories of Dr. Celander and the hours spent in Biochemistry. Synthesis and degradation of amino acids interlaced with philosophical dissertations on their origin put personality into an otherwise sterile test tube. The patience and understanding of our queries by Mrs. Celander and the lab instructors enabled us to create a sound physical structure which we could expand into housing our entire medicinal storehouse. Our many hours of hard study were encouraged by the individual courage embodied in this one professor.
OSTEOPATHY
History and Fundamentals
Byron E. Laycock, D.O.
Chairman

Dr. Laycock lecturing
“Dr. Osteopathy” is a title which at COMS can refer to only one individual. Osteopathic theory and manipulative techniques are presented in a fashion that enables the student to idealize the teacher, yet feel very competent in his own everyday practice of the subject. The multitudes of students who are grateful for the wisdom imparted to them are joined by the present student body. As the osteopathic oath states, “I will look with respect and esteem upon all those who have taught me my art.” We epitomize the phrase when referring to Dr. Byron Laycock.
DEPARTMENT of PHYSIOLOGY

James A. Orcutt, Ph.D.
Chairman

Tools of the trade.

Dr. Orcutt

Mrs. E. Celander, lecturing
Physiology is the science dealing with functions of the living organism. Of any single part of the basic curriculum, this most nearly encompasses the entire practice of medicine. The learning of such a vital subject is well entrusted to as learned a gentleman as Dr. Orcutt. A scholarly understanding of the mass of available material is presented in a fashion that is easily enriched by future diagnostic and therapeutic variations. Any “new” discoveries in the healing arts are easily intermeshed with this sound presentation of our present knowledge.
Surgery 1

Traumatic injuries are more commonplace today than ever before and the modern physician must be equipped to deal with them as they present in the hospital emergency room with increasing frequency. Dr. Gonda and Dr. Senty have been able to supplement their lectures with live closed circuit television broadcasts of these surgical procedures to the class. Actual practice of suturing and tying in the classroom, serves as a prelude to the situation which the student will encounter in a very brief time. The skillful gloves he observes on the television screen may well be placed on his own hands shortly.
Roger Senty, D.O.
In an age of mechanization and automation, it is inevitable that the physician will be presented with myriad facts and voluminous figures upon which to base clinical decisions. To help us interpret this data and quantitate it in an applicable form this course was instituted. Not to have a machine think for us, but rather with us and to help determine the reliability and efficacy of new forms of treatment is the aim of this lecture series. We cannot become expert in the subject by our limited exposure, however, we can appreciate the science and use its scientists to our advantage.
A course in Human Ecology, by virtue of its title, is obligated to encompass the vast field correlating man to mankind. Biological man, as dissected and analyzed in the clinical laboratory, is not the individual with whom we are confronted in practice. To aid us in treating total man according to our osteopathic philosophy, Dr. Fitz and his staff present a pathway to follow in the exploration of this ever increasing realm. Tools are developed in lecture which become implemented and sharpened in our clinical years.
Wives Club

Senior Wives
One of the many projects of the wives club each year is providing baskets of food during the holiday season to needy families in the Des Moines area.
The annual Christmas party sponsored by the wives club for the children of the clinic patients.
One of the greatest satisfactions a man can experience, is to be recognized by his fellow man for exceptional service. Sigma Sigma Phi Fraternity is an organization with that purpose. It honors Junior and Senior students for outstanding service to the school and profession by electing them to membership in this fraternity. Sigma Sigma Phi also performs many important services to the school and profession. Among these are: managing the Pacemaker yearbook and Pulse, awarding student loans, providing guides for school tours and guides for graduation, managing senior week and the Senior Ball, conducting the AOA Christmas Seal drive at the school, and many more.

S.R.V.

He Profits Most Who Serves Best.

Arthur F. Sheldon

S.R.V. is a new organization at C.O.M.S. It was begun in 1966 to provide an added work force to the school in order that projects which had heretofore gone undone might be accomplished. Its constitution provides that the only qualification for membership be a willingness to serve the school. S.R.V. remains one of the legacies of the class of 1967, as it was many members of this class who saw the need for such an organization and implemented its founding.

Psi Sigma Alpha
Gamma Chapter
National Scholastic Honor Fraternity

Psi Sigma Alpha, National Scholastic Honorary Fraternity represents and encourages scholarship, friendship, cultural interests and Osteopathic progress.

Although high scholastic average is a prerequisite for membership it does not alone constitute election. Broad cultural interests and good moral character also influences the selection of members.
Junior Members

(Seated Left to Right) Mary Martin, Walter Duffin, Katherine Vroman
(Standing) Robert Hand, David Harmon, Harry Glass, Stephan Hauptman Larry Wyatt, Stanley Greenberg
(Not Shown) Thomas Buroker, Leonard Aronovitz, Phillip Hollander
Frequent Lecturers are brought to C.O.M.S. throughout the course of the year to supplement the subject matter covered in the classroom. Among the best lecturers heard are those who are sent under the auspices of the Academy. Their topics are usually of the practical aspects of Osteopathic Medicine. The Student branch of the Academy is also directed along these lines.

The Graduate School of the College of Osteopathic Medicine and Surgery offers advanced work leading to the degree of Master of Science in Anatomy, Biochemistry, Microbiology or Physiology. The program is currently administered by Dr. Donald F. M. Bunce, II, as Director of the Graduate School. Faculty members of the Graduate School are also on the College faculty. In this manner the medical orientation of the program is encouraged.

INTERNERSHIP
Doctors' Osteopathic Hospital
Erie, Pa.
LOCATION: Erie, the third largest city in Pennsylvania and a leading city in the United States in diversification of industry, has an international lake port, a multimillion dollar tourist trade, and ample number of schools, churches, cultural and recreational facilities.

PHYSICAL FACILITIES: Doctors Osteopathic Hospital has 100 beds and has plans for a multimillion dollar expansion program having purchased extension real estate holdings from the Erie Redevelopment Authority for future clinical education and staff growth.

CLINICAL STAFF: The teaching staff is composed of certified and board qualified physicians in all the departments. This is supplemented by an active staff of general practitioners. Lectures, clinical conferences, audio-visual aids and visiting professional programs are scheduled. The hospital has a department of Nuclear Medicine and a Heart and Lung station.

STIPEND: Adequate compensation is rendered.

APPLICATION: Inquiries should be directed to Intern Committee, Doctors Osteopathic Hospital, 239 West 10th Street, Erie, Pennsylvania.
